TOTALS.....		33.98	34.24	33.76	

1868 I cannot understand the coup in this G which is only about 100 yds from 1.82 its exposure perhaps better and its reservoir is  $1\frac{1}{4}$  ft. below the ground. but these circumstances can hardly explain the discrepancy Gauge F in same situation all through

1872 The reservoir of this G. is sunk in the ground; and has been in the same position 7 years and is supposed to be a little leaky. The G. is also overgrown by radishes run to seed & a little sheltered by trees<sup>N</sup>. Gauge F' in same situation all through.

1875 July The tube of the gauge getting blocked the water remained in the funnel for some time and probably .20 evaporated

Gauge E Situation moved from Skene Street  
107 ft above sea level

1874 In Dec<sup>r</sup> a good deal must have been lost  
by the blowing of the snow the observer did  
not attempt to melt this snow every day

1875 Gauge slightly sheltered by trees on the N. 15 ft high
