C C C C C C

x G broken so Dec. fall only estimated

1867 G broken by frost so fall estimated for 1st 8 days from G on tower

Gauge C in same situation all the time

1869 The position of gauges 6 & 5 is such that I can with difficulty reach them myself. Since I fear they have been frequently inaccurately measured this year, or the funnel has been closed, I do not wish to change their position but I fear I must.

Gauge C in same situation all through  
 1874 Dec<sup>th</sup> amount computed from Skene Street  
 Gauge could not be moved on Jan 1<sup>st</sup> 75 on account  
 of severe frost so Dec<sup>th</sup> 74 & Jan 1<sup>st</sup> 75 were read together  
 in one sum

1875 Jan<sup>th</sup> Amount computed by W Symons; September  
 gauge overflowed; Oct<sup>th</sup> should probably be 3.93.

1876 Gauge very much neglected, often stuffed up overflowed  
 in Nov<sup>th</sup> Dec<sup>th</sup>

1877 Mr<sup>th</sup> Beverley says there is evidently something wrong with  
 his gauge but he cannot tell what as it is out of reach  
 of my personal inspection
