TOTALS -				25.99	31.42	28.90	31.08	35.97	31.63	30.60	

1865 - Snow rests in No 2, when it is swirled out of No 1; and it also gulps jets of spray in dashing showers. On the other hand it gets less than No 1 when grass has (unobserved) projected over its funnel, and also when leaves blown into it assist in detaining and evaporating small quantities of moisture.

The gauges are about 1 yard apart.
 1869 x The great discrepancy in Dial is owing to the sudden absence from home of the observer and consequent neglect to put the proper proportion quantity of snow into each bottle previous to thaw. The of flush with the ground retains the snow while if there is a wind it is mostly blown out of the other.
