December -	2.57	1.58	5.87	3.67	
TOTALS -		28.69		29.88	

x 1868 August away from home gauge ran over Imber is situated in a hollow of Salisbury Plain (so called 'for it is anything but a plain - it suffers much in consequence from spring frosts, I suppose the cold air descends from the hills around, the dew lies fall early and copiously, often on a summer evening when it is damp and chilly below it remains warm and pleasant in the hills for another half hour. My well is 90 ft deep and was about dry in December. There will be seen be 70 ft of water in it, and most of the wells in the Village (about 20 ft lower than the Vicarage.) will run over - when this takes place the springs are said to break and we have a copious stream of beautifully clear water flowing through the Village, when the springs break and when they dry up are always unhealthy times. Drove off from 8th cut off rank of Kildare, June 1869 My well was almost dry the 1st half of Dec. the water began to rise about the 10th
