1921. This g. has been moved (at some time) a few yards from its former position & is now quite close to a small fruit tree.

* The gauge is at times the rain being so damaged in transit from

1922. [But 4. 26. in the Hall who is only of Thirsk for a few weeks in the year, has asked me to make out the station. I find that the gauge has been moved to a better position, but I also find that the readings are really from a dial gauge on a post with its rim some 5' 6" above the ground; the readings being taken from the 5" square. It is case of error. The gardener says to compare the two gauges & that there is very little difference - I fancy he has made use of the dial gauge for some time, possibly for 20 or 30 years or more. 25.11]
