NOTES on inspections, unorthodox equipment or exposure, changes of equipment, site or altitude (each note to be dated):

Site NSR 43-5034 4561 from 6" map [16.5.1975]

Review of data for 1941-70 Averages indicates that data from this site can be deemed homogeneous with that from the slightly different site 1941-48; but NOT homogeneous with data for Sfr. 117630 (1948-56). Review also suggests data 1957-1966 erratic, probably due to trees 20-30 ft high: data nevertheless accepted for 1941-70 averages project.

NOTES on years with incomplete or unsatisfactory data:

- * 1916-50 Average computed from unhomogeneous site data: nevertheless used for BR purposes
